Creating Networks and Power Systems that Evolve

IT infrastructures and networks grow continuously within your enterprise. In Pakistan, normally the IT networks and power infrastructure are built without a long-term vision. Without a roadmap, the capital investment into IT infrastructure and networks becomes an unnecessary overhead, injected with unstoppable daily resources impeding long-term growth for the enterprise. This is not uncommon.

Technology and Innovation

HISPAR Networks is an enterprise technology and power solutions provider in the region, partnered with leading technology brands - which have powered Large and Mid-sized businesses worldwide.

Challenge to your company is progressive and growth planning for the next decade - where your user base will increase its footprint, data connectivity and transfers will increase, power and storage capacities will run out of fuel, information exchange will get competitive and rapid.

Questions arise - where would a company position itself competing with in what marketplace in the next decade. HISPAR delivers vision, hardware, engineering, technology and resources to evolve your company as a fast growing entity.

Systems

A server room with blue lighting and server racks. The room is filled with rows of server racks, some of which have glass doors. The lighting is a cool blue, creating a high-tech atmosphere. The racks are arranged in a long row, and the ceiling has exposed pipes and cables.

POWER ZONES

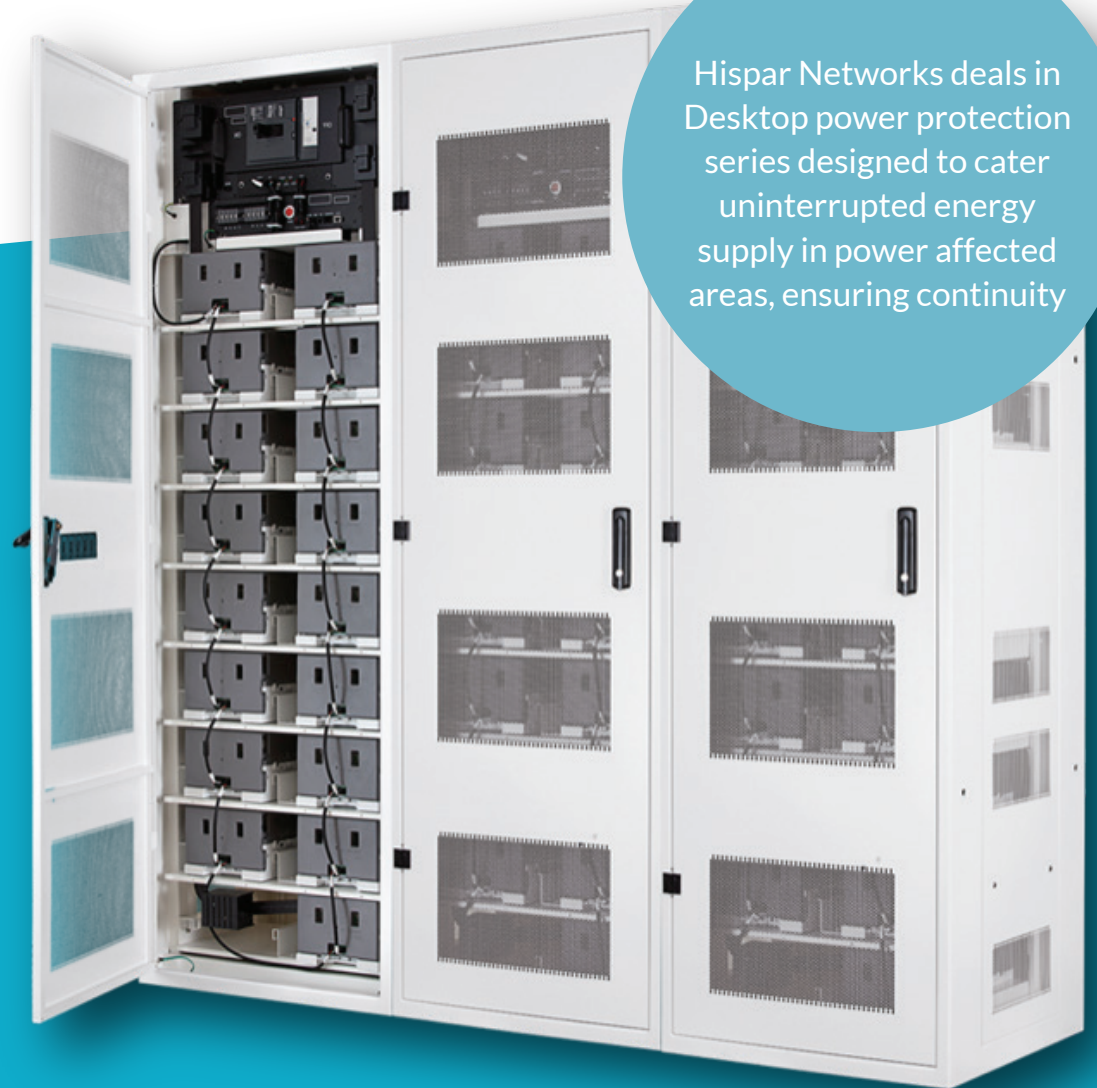

HISPAR supplies a complete and modern range of high-performance products to deliver high-end network and infrastructure built to support large data centers, telecom and financial hubs, large industries and mid to large size enterprises.

HISPAR powers the companies with long-lasting Power generating and backup technologies and hardware to support growing power needs

Power Solutions and Backups

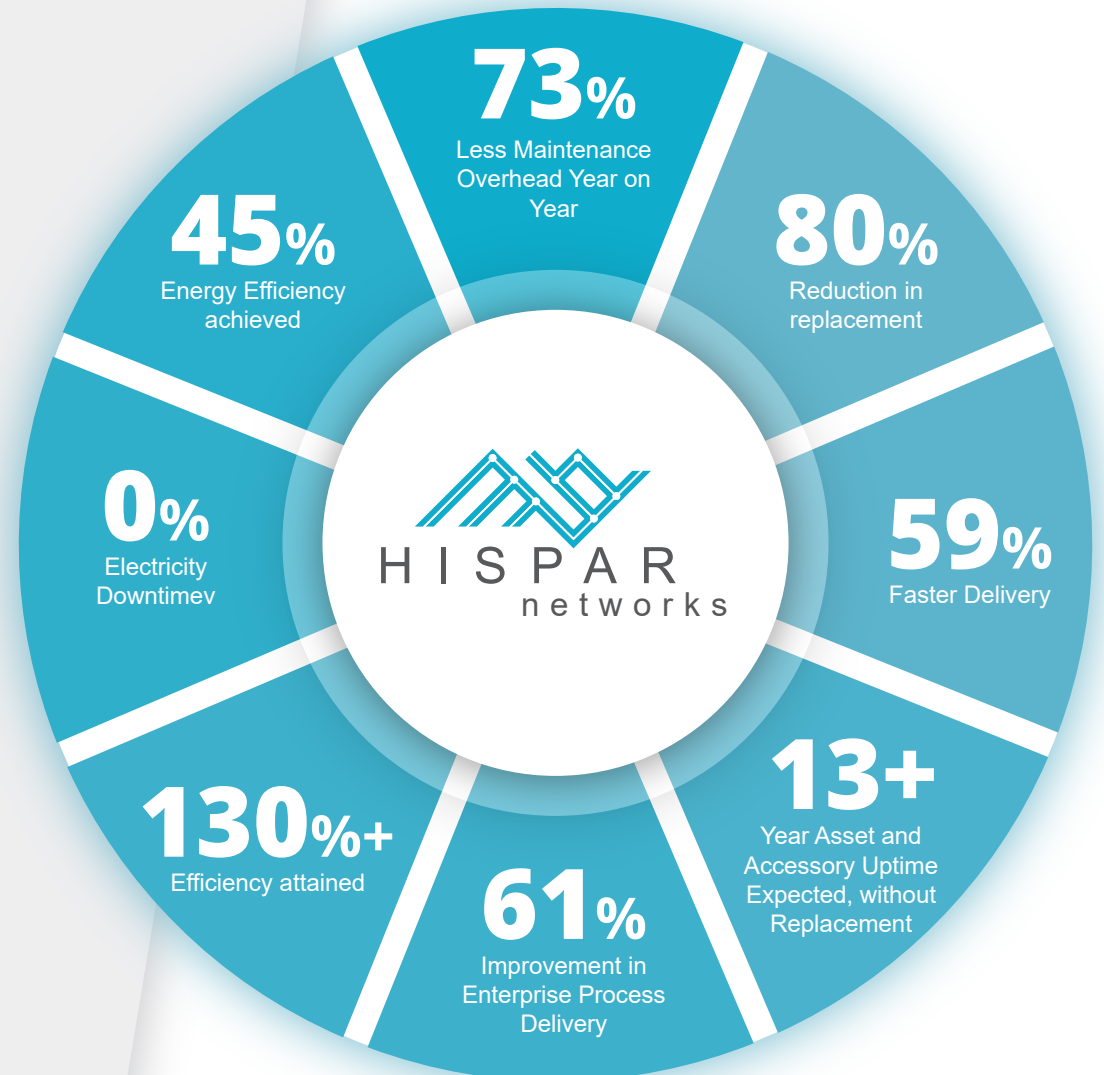

Power protection is serviced with Smart UPS series from APC (Schneider) designed for Large and Mid-sized companies.

Hispar Networks deals in Desktop power protection series designed to cater uninterrupted energy supply in power affected areas, ensuring continuity

Data Center

- Hispar engineers solutions for offline and online access to servers and data centers, enabling complete operational control
- HISPAR works on technologies connecting one to many devices, equipping engineers with control and authorization
- Multi-device connectivity is Hispar Network's forte, allowing multi-platform connectivity
- Tier -3 Data Center, the biggest ever in private sector, is engineered, installed by Hispar Networks. A second in Pakistan - connecting Mid-sized to large companies over the cloud - offering limitless storage, data and cloud technologies
- Tier 3 Data center shall share co-location Data Center Services like dedicated servers, virtual servers, managed hosting, racks and cabinets.
- Delivering Modern Technologies in --
* DRaaS * SaaS * IaaS * PaaS
- Planning, Installing, Pakistan's 2nd Largest Rated-III DR Site
- Leader in Global Connectivity..

Infrastructure Enablement / Commissioning

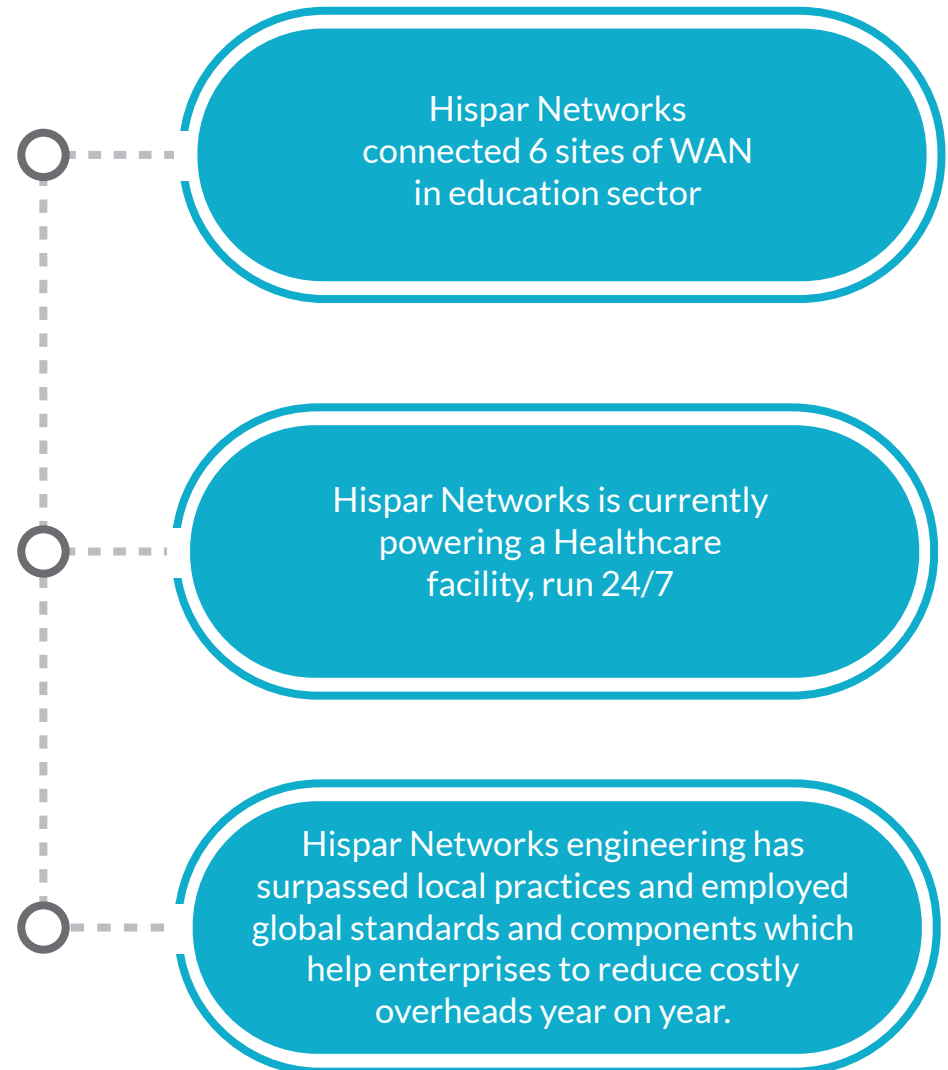

Evolving Technology expansion strategies with modern applicability with --

IoT | WAN - High-speed connectivity | SD-WAN | Cloud Server - Hosting, Storage and Backup Facilities

Companies plan lesser technological footprint yet envision optimized technology performance. Hispar Networks sets up scalable onsite and offsite network layouts designed to cost lesser for long-term continuity.

Enterprises leverage ROI over spread cost of implementing scalable, flexible, high-grade technology networks, connecting servers, data centers supported by an evolving network.

Hispar Networks delivers the expertise and experience delivered, designed, installed, tested, operated and now maintains large networks powering data centers, IT networks spread over multiple sites.

Always on the Advantage

→ Engineering Expertise

Mid-Scale to Large Sized infrastructure setups and commissioning

→ Power Generation Equipments

Power and Energy Backup technologies, optimizing savings and electricity utility

→ Data Servers and Data Centers

Installation, Configuration, Set up and Commissioning achieved

Clients and Partners – Sharing the Optimism

Hispar Network is partnered with France's leading power supply company, helping enterprises understand the power needs for the corporate sector. Hispar has helped companies achieve near-0 downtime, enabling companies to expand on sustainable power growth.

Hispar Networks offers complete range of Power backup and UPS series aimed for large and mid-sized companies. Currently, Hispar is utilizing the power of APC to set up Pakistan's 2nd largest and private sector's 1st Tier-III data center.

Molex – when it comes to server and hardware maintenance, Hispar Networks has relied on long-lasting Molex components. Covering almost part of Molex, Networks built with Molex components of semiconductors, Fiber Optics, Sockets, Communication and control protocols; Molex is best in keeping year-on-year maintenance overheads low with lower risk of failure and total breakdown.

Molex is Hispar Network choice for preventive technology enablement for data-centric infrastructure, which are to run 24/7.

Online Support + Call Center Managed Services - Answered and Connected

***Our theory is simple –
Service readily available and accessible.
Whenever, Wherever.***

Call-Center - Managed Services, Helping Every Time, Anytime, Everywhere

Hispar Networks is available. Round the clock, with superior service and response time. Hispar Networks ensure quality delivery and positions itself ahead of others in the marketplace. Hispar Networks maintains its streak of never compromising on quality, time-based delivery, standard and professional practice.

Hispar continues to improve standard upon standard, achieving newer practices and setting up benchmark for industry to move on – Hispar Networks is already there.
